## IMPLEMENTATION EXPERIENCES

With more than 9 years of software experiences in POS solutions.

- **Inventory Management**

The Inventory Management provides automation of inventory transfer, issues and adjustment. It also keeps track of inventory and processes inventory movements and is designed to assist to monitor stock levels and promotions.

- **Distribution Management**

The Distribution Management provides automation of quotations, sales orders, delivery orders, sales invoices, packing lists. It provides sales results by generating various sales analysis and gross profits reports.

- **Purchase Management**

The Purchase Management automates purchase order, goods received and supplier invoice and provides a purchase history for analysis.

- **Financial Management**

The Financial Management provides the ease and flexibility of maintaining their accounts and enables easy understanding of accounting data by providing essential financial reports that spells out the profitability of the business and credit controlling. It provides full financial reports such as P&L and Balance Sheet to reflect the company's financial standing.

- **POS Management**

It replaces the traditional usage of a common cash register. Designed specifically for types of business to manage a combination of retail and counter sales activities. It can register all transactions at the counter by using a scanner or keyboard.

## simple retail solutions

For global expansion

## POINT OF SALES SOLUTIONS

Its easiness & affordability make it available even for new startup or single store. Provide real time data: POS, members, inventory, wholesale modules in full integrity.

For multi chain stores, the online POS seamlessly & automatically consolidate individual stores data into centralized way of managing your chain store.

- Support heavy transaction, single or multi outlets
- Track & analyze sales, products, customer info

## - Profiles of Smart POS -

### INNOVATION, CONSTANT DEVELOPMENT & FOCUS

Since 1997, Smart-Acc has helped companies win at retail with advanced software solutions that transform business performance in the field.

Smart's feature-rich software applications use smart technology to integrate seamlessly with intelligent in-office management components, automating day-to-day operations, optimizing in store effectiveness, and accelerating information velocity to and from the field.

Across small to midsize companies Smart-Acc has established an unmatched track record for rapid, successful delivery of cost-effective solutions.

For total retail management & execution, Smart-Acc is acknowledged as the leader in its forte of total integrity & simple global data integrity.

### TECH ASPECTS & DATA COMMUNICATION

The system is capable of connecting single or multiple POS to HQ, using LAN or internet. It enable all POS counters & branches communicating via the internet to the main server from anywhere in the world. The server is located at the customer's own HQ premise. Back office functions can be accessed from POS or individual back office workstations, & vice versa. Security options will allow access to selected users. All "sensitive" areas of the program are access controlled as well as password protected.

The POS data is stored on its own hard drive to maximize its reliability and independence on the server or other devices. The communication between the server and POS terminals take place every few seconds, to provide real-time data processing, inventory & accounts updates. If, however, the server is inaccessible or the internet is not functional, the POS terminals will continue to operate independently without interruption until the communication is fully re-established.

## System Requirements
